

Part I

Writing

(30 minutes)

(请于正式开考后半小时内完成该部分，之后将进行听力考试)

Directions: *For this part, you are allowed 30 minutes to write an essay on **the importance of honesty in academic performance**.. You should write at least 150 words but no more than 200 words.*

请用黑色签字笔在答题卡1 指定区域内作答作文题，在试题册上的作答无效！

请认真填写以下信息：

准考证号：

--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--

姓名：_____

错填、未填以上信息，按违规处理！

Section A

Directions: *In this section, you will hear two long conversations. At the end of each conversation, you will hear four questions. Both the conversation and the questions will be spoken only once. After you hear a question, you must choose the best answer from the four choices marked A), B), C) and D). Then mark the corresponding letter on **Answer sheet 1** with a single line through the centre.*

Questions 1 to 4 are based on the conversation you have just heard.

1. A) Entertainment journalists
B) Oscar nominations
C) Film advertisements
D) TV commercials
2. A) Its leading role is Matthew Cherry.
B) Its plots reveal the actual life of a player.
C) It is a fairy tale about romance.
D) It is about men doing their daughters' hair.
3. A) They are popular.
B) They are crucial.
C) They are excellent.
D) They are controversial.
4. A) They greatly advertise for actors.
B) They relieve people's mental stress.
C) They boost the development of movie.
D) They enhance interpersonal connections.

Questions 5 to 8 are based on the conversation you have just heard.

5. A) Sit down and relax yourself.
B) Ask for help from colleagues.
C) Try to suppress strong feelings.
D) Understand the value of work.

6. A) They are more focused on their tasks.
B) They are better at work than men.
C) They are more susceptible to others' feelings.
D) They badly cooperate with other colleagues.
7. A) Making reasonable decisions without any emotion.
B) Weighing each decision in a more logical way.
C) Discussing with others before making the final decisions.
D) Retaining relevant emotions and discarding irrelevant ones.
8. A) By transforming what we are doing.
B) By communicating with our bosom friends .
C) By doing more physical exercise every day.
D) By diverting our attention from terrible matters.

Section B

Directions: *In this section, you will hear two passages. At the end of each passage, you will hear three or four questions. Both the passage and the questions will be spoken only once. After you hear a question, you must choose the best answer from the four choices marked A), B), C) and D). Then mark the corresponding letter on **Answer Sheet 1** with a single line through the centre.*

Questions 9 to 11 are based on the passage you have just heard.

9. A) The tips for young employees to get promotion in a workplace.
B) The influence of temperature on people's cognitive performance.
C) The importance of educational background on being employed.
D) The factors in avoiding employees' poor working performance.
10. A) Women did better as the temperature rose.
B) Women could keep on working longer.

C) Men performed better on math and verbal tasks.

D) Men did worse on more challenging tasks.

11. A) Focus on their profit and productivity.

B) Lessen their employees' working time.

C) Take the workers' comfort into consideration.

D) Improve the service quality for customers.

Questions 12 to 15 are based on the passage you have just heard.

12. A) They actually have a smaller carbon footprint.

B) They bring more plastic and cardboard wastes.

C) They help people save a lot time on cooking.

D) They provide consumers with delicious meals.

13. A) Lessening food waste and simplifying supply chain.

B) Trying to prepare food with your families at home.

C) Taking more green vegetables at your table.

D) Having less meat and eggs for your meals.

14. A) People prefer to package food with plastic material.

B) People don't have the awareness of environmental protection.

C) People produce more food waste in meal delivery services.

D) People don't know how to recycle the packaging material.

15. A) Strengthening the supervision of authorities.

B) Taking the plastic bags as the greatest evils.

C) Encouraging to reduce meal delivery services.

D) Considering the whole scheme of food production.

Section C

Directions: *In this section, you will hear three recordings of lectures or talks followed by three or four questions. The recordings will be played only once. After you hear a question, you must choose the best answer from the four choices marked A), B), C) and D). Then mark the corresponding letter on **Answer Sheet 1** with a single line through the centre.*

Questions 16 to 18 are based on the recording you have just heard.

16. A) Double-digit inflation became a national concern.
B) Prices of all kinds of goods decreased dramatically.
C) Consumers protested against the jump in food prices.
D) Authorities made great efforts on controlling inflation.
17. A) Because restaurants are not in service.
B) Because they prefer to eating at home.
C) Because eating outside is unhealthy.
D) Because food prices are increasing.
18. A) Contributing to fewer road accidents.
B) Having more injuries and greater damage.
C) Reducing the expenditures of gasoline.
D) Improving the problem of traffic jams.

Questions 19 to 22 are based on the recording you have just heard.

19. A) It was suggested by professional doctors to their patients.
B) It was from a campaign promoting a machine to count steps.
C) Japan adopted it to promote physical and mental health.
D) Medical health institutions introduced it to Americans.

20. A) To figure out how many steps we should take a day to keep fit.
B) To know whether fitness trackers are popular among the public.
C) To test what kinds of foods are good to live a long life.
D) To understand the importance of taking exercise for a happy life.
21. A) Women will be more healthy with walking more steps.
B) Walking more will boost our memory and cognition.
C) Walking over 7,500 steps brings most benefits to our health.
D) Women taking 4,000 steps live longer than those walking fewer.
22. A) Taking other physical exercise besides walking.
B) Keeping a balanced and nutritious diet.
C) Arousing the awareness of weight control.
D) Making sure of 8-hour sleep a day.

Questions 23 to 25 are based on the recording you have just heard.

23. A) They often overlook or underestimate its implications.
B) They pay much more attention to precaution measures.
C) They are worried about the damages it brings to them.
D) They think it is one of the deadliest natural disasters.
24. A) By putting on sun-proof clothing and wearing sunglasses.
B) By establishing new buildings with blue walls.
C) By staying at cool shaded areas and drinking fresh water.
D) By taking medicines to prevent heat stroke.
25. A) In slums.
B) In deserts.
C) In tropical rainforest.
D) In thinly populated areas.

Section A

Directions: *In this section, there is a passage with ten blanks. You are required to select one word for each blank from a list of choices given in a word bank following the passage. Read the passage through carefully before making your choices. Each choice in the bank is identified by a letter. Please mark the corresponding letter for each item on **Answer Sheet 2** with a single line through the centre. You may not use any of the words in the bank more than once.*

In 2007 more humans lived in cities than outside them for the first time. It was a 26 for 5,000 years in the making. However, the internet has been quicker to reach the halfway mark. Over 50% of the planet's population is now online, a mere quarter of a century after the web first took off among tech-literate types in the West. The second half of the internet revolution has 27. It is changing how society works.

Most new users are in the emerging world; some 726 million people came online in the past three years alone. China is still growing fast. But much of the rise is coming from poorer places, 28 India and Africa. Having seen what fake news, many observers are worried that politics will be 29, from the polarization of India's electorate to the persecution of Myanmar's Rohingya minority. On the positive side, 30 aid workers talk endlessly and earnestly about how smartphones will be 31 for farmers to check crop prices, let villagers sign up for online education and help doctors 32 vaccination rates.

Less well appreciated is that the main attractions of being online are the same for the second half as they were for the first. Socialising and play are the mass 33. And people 34 their friends—and strangers—on social media with foolish home-made videos on YouTube or TikTok, an app focused on short, humorous clips. Cheap data plans and thumb drives bring pirated films to millions who may never have been to a cinema. Dating apps are more popular than farming advice; video games are more popular than either. Such 35 are unlikely to make their way into many UN development reports. But they are a boost to the stock of human happiness.

- | | |
|---------------|-----------------|
| A) halted | I) charities |
| B) boost | J) bonuses |

| D) generation | L) appeal |
| E) exclusive | M) notably |
| F) entertain | N) incidentally |
| G) transition | O) emerged |
| H) sparking | |

Section B

Directions: *In this section, you are going to read a passage with ten statements attached to it. Each statement contains information given in one of the paragraphs. Identify the paragraph from which the information is derived. You may choose a paragraph more than once. Each paragraph is marked with a letter. Answer the questions by marking the corresponding letter on **Answer Sheet 2**.*

Fewer Students Are Going To College

[A] This fall, there were nearly 250,000 fewer students enrolled in college than a year ago, according to new numbers out Monday from the National Student Clearinghouse Research Center, which tracks college enrollment by student. “That’s a lot of students that we’re losing,” says Doug Shapiro, who leads the research center at the Clearinghouse.

[B] And this year isn’t the first time this has happened. Over the past eight years, college enrollment nationwide has fallen about 11%. Every sector—public state schools, community colleges, for-profits and private liberal arts schools—has felt the decline, though it has been especially painful for small private colleges, where, in some cases, institutions have been forced to close. “We’re in a crisis right now, and it’s a complicated

one,” says Angel Pérez, who oversees enrollment at Trinity College, a small liberal arts school in Hartford, Conn.

[C] The biggest factor for the years of decline is the strong economy. The last time U.S. college enrollment went up was 2011, at the tail end of the recession. As the economy gets better, unemployment goes down—it’s currently at 3.5%—and more people leave college, or postpone it, and head to work. When the recession hit a decade ago, the reverse happened: Many people, especially older adults, returned to college. That bump in college enrollment set records, and in some ways the current downturn is simply “colleges returning to more historic levels of enrollment,” Shapiro says.

[D] U.S. demographics are also shifting. The number of high school graduates is flat—and in some cases declining—because of lower birth rates about 20 years ago. Those numbers are also projected to decline, so the trend of fewer students coming from high school isn’t going away anytime soon.

[E] And finally, there’s the cost of college. States are putting less money into higher education, and that’s led to an increased reliance on tuition. As tuition goes up, and grants and scholarships don’t keep pace, that’s pushed the cost of college down to students and their families. Without state investment, institutions are strapped, and so are American families.

[F] These factors—and the data that support them—find their way into Pérez’s meetings with the budget team at Trinity College. “Decreasing demographics, a decreasing ability to pay and an increasing lack of desire to pay from the people who can afford it” are the things that keep him up at night, worrying he may not fill his freshman class. Even families who are able to afford higher education are starting to ask themselves whether the cost is worth it. “All of it becomes the perfect storm,” he says.

[G] A strong economy and soaring college costs have made it even more difficult for colleges to persuade students to enroll. And yet, employers still need skilled workers, whether it’s a profession that requires a four-year degree, other jobs that require an associate degree, or

skills or trades that need certificates or credentials. If fewer people are getting those credentials, those jobs often sit empty. Community colleges play a large role in “skilling up,” offering associate degrees in technical and high-demand fields. But enrollment at community colleges is down about 100,000 students from the fall of 2018.

[H] And despite a healthy economy, many of the jobs that are being filled right now are low-wage ones, Shapiro explains. “Adults are feeling that, as long as they have a job, they don’t need to go to college,” he says. “And yet many of those jobs today don’t really have the career potential or the earnings potential to support a family. However, they could get these benefits if they had a college degree.”

[I] In addition to increased earnings over time, research shows that having a college degree means you are less likely to be unemployed and more likely to weather uncertain economic conditions, such as a recession. So if people are choosing not to go to college right now, there may be consequences down the road.

[J] It’s a simple solution: When you don’t have enough students, it makes sense to find and recruit some additional students. So the question now is, what is the next group of students for recruiters to target? Based on the shifting demographics in public schools, it’s likely that Hispanics and first-generation college students are at the top of that list and will make up a greater share of any future increase in enrollment.

[K] Pine Manor College, a small private college in the Boston area, knows the pain of this enrollment crisis all too well. Because it serves less than 350 students, the college has to fight for each one. Recruitment has become essential to Pine Manor’s survival. For years, the college drew many of its students from nearby communities. But as New England graduates fewer high schoolers, Pine Manor has set its sights beyond Boston, by about 2,000 miles. Tom O’Reilly, the college’s president, now makes regular recruiting trips to El Paso, Texas. “We’re very intentional about who we’re going to serve,” says O’Reilly, who is specifically looking for students whose parents haven’t gone to college. The pitch

is not for everyone. While Pine Manor is generous with aid, it's still more expensive than community college and far from home—and often, far from warm.

[L] But, so far, O'Reilly says, these trips are paying off. Texans now make up 6% of Pine Manor's enrollment—that's almost two dozen paying students who had probably never heard of, let alone considered, the school until they heard directly from its president.

[M] While a lot of recruiting focuses on high school students, many colleges might do well to look at another pool of potential students: adults returning to college. New research shows there are about 36 million Americans—mainly adults—who have some college and no degree. These students offer a huge opportunity for colleges, and in some communities they are far more prevalent than seniors in high school. "In Michigan, we have about 100,000 high school students, but we have about a million adults with some college and no degree," says Erica Orians, who works with community colleges in that state. That means for every high schooler, there are 10 prospective adult students there.

[N] The challenge is that returning adult students are a lot harder to recruit. For high school students, Orians says, "we know where those people are. High schoolers are a captive audience." But when it comes to adults, she says, "they are everywhere. They are working. They are parents. They are engaged with their community." Adults have lives, she says, "they move, they change their addresses and their phone numbers."

[O] Of course, it's much more complicated than simply recruiting more—or different—students. "A lot of schools believe, 'If we recruit hard enough, we will get people who want to come,'" Pérez says. "I just don't believe that's enough." Still, every year, he says, Trinity College—and many others—put more resources into the admissions effort. But the school is also looking at other options, such as exploring partnerships with a global tech company, bringing in additional revenue by helping train their existing employees in liberal arts.

36. There are more adults without college degrees in some communities compared with high school graduates.
37. Now, many of low-wage jobs cannot provide workers with opportunities to get promotion and substantial money to support their families.
38. An increasing number of students choose to work rather than attend college with the economy reviving.
39. It is not the first time that student enrollment rate has dropped.
40. People with college degrees will enjoy increased incomes and are not easily to be laid off.
41. The high tuition and long distance hinder Pine Manor from recruiting first-generation college students.
42. It is estimated that the amount of high school graduates will continue to descend in the near future.
43. First-generation college students will be one of dominant sources in recruiting additional students.
44. Some special families doubted whether the efforts of spending on higher education will be worthy.
45. Trinity College is seeking for cooperation with a tech company to increase revenue through training employees in humanities.

Section C

Directions: *There are 2 passages in this section. Each passage is followed by some questions or unfinished statements. For each of them there are four choices marked A), B),*

C) and D). You should decide on the best choice and mark the corresponding letter on **Answer Sheet 2** with a single line through the centre.

Passage One

Questions 46 to 50 are based on the following passage.

Skinny gray whales have been washing up on the West Coast at a rate that's alarming scientists. At least 64 gray whales have turned up dead along the coasts of California, Oregon and Washington this year—the highest number since 2000.

John Calambokidis, biologist of Cascadia Research emphasizes this year, his team's most common finding when responding to the perished whales have been poor body conditions due to hunger, which posed a serious threat to the ecosystem of the West Coast. "They'll have a visible *blubber layer* (鲸脂层) but there will be almost no oil at all—no fat left in that blubber layer," he says. posed a serious threat to the Antarctic ecosystem.

Calambokidis explains that gray whales typically feed for months before they migrate south to their breeding grounds in Mexico. During the whale's migration, they typically fast for about 4 months, he says. So many of the whales that have died, he says, "didn't quite have enough of a reserve" to make it through the fasting period.

He gives two reasons for this lack of fat reserve in some of their bodies: an increasing gray whale population and an inadequate food supply. Before migration begins, most gray whales feed on tiny, bottom-dwelling *crustaceans* (甲壳纲动物) in Arctic waters near Alaska—but scientists believe there might not be enough prey to get them fat enough for their long journey south. "Gray whales have this unique adaptation of being able to feed right on the bottom, sucking up *sediment* (沉淀物) and organisms," Calambokidis says. "So scientists think, because that's where most of the gray whales go and the main prey they feed on, that's where the issue is."

But there's more to the phenomenon than just the decrease in their prey, he says. Not only are the whales battling for food, they're also faced with a warming Arctic. The Marine Mammal Center recognizes climate change as a factor in gray whale's feeding patterns. "Climate change affects water temperatures and prey availability, leading to shifting food sources for marine mammal populations and other marine species," the center says.

When desperate gray whales can't access the food they need to survive, they'll begin appearing in unusual areas where they aren't normally found—making themselves easily to be hurt by human activities. Some of their recent deaths along the West Coast—from Puget Sound, Washington, to Long Beach, California—have resulted from blunt force trauma injuries, usually from boats. When gray whales try feeding near these coastal areas, they are faced with human-made obstacles, such as shipping, fishing and netting.

46. What does Calambokidis's research find about gray whales?
- A) They have been washed up and dead on the coast of California.
 - B) They have little oil left in the fat layer owing to starvation.
 - C) Their deaths posed an unprecedented threat to the ecosystem.
 - D) Their damaged blubber layer led to their inability to suck up prey.
47. What can we know about gray whales' migration?
- A) They can feed enough food to get through the starvation.
 - B) There is no sufficient prey in their breeding grounds.
 - C) Mexico reserves food supply for their long journey south.
 - D) They generally don't have any food intake for a long time.
48. What does Calambokidis say about the deficiency of fat reserve in gray whales?
- A) It makes gray whales unable to adapt to feeding right on the bottom.
 - B) It results in gray whales' failure to get enough energy to migrate southward.
 - C) It urges most gray whales to feed on tiny crustaceans in Arctic waters.
 - D) It results from an growing number of gray whales battling for scarce food.
49. How does the climate change influence gray whales' feeding patterns?
- A) By diverting their food sources.
 - B) By killing their available prey.
 - C) By destroying the food chain.
 - D) By changing their feeding habits.

50. What can we learn from the last paragraph?

- A) Massive fishing by human beings threatens the survival of gray whales.
- B) Gray whales try to break human-made obstacles in search of food.
- C) Gray whales in uncommon areas are vulnerable to human activities.
- D) Recent deaths of gray whales have caused by human's sharp weapons.

Passage Two

Questions 51 to 55 are based on the following passage.

In May 1999, a group of researchers from the Technical University of Berlin launched an unusual satellite. At a time when most of the machinery in orbit weighed thousands of kilograms, TUBSAT was a miniature 45kg. A box that measured 32cm on each side, it carried three video cameras, the idea being to test whether such a tiny spacecraft could capture useful imagery of Earth. The researchers cited low mass, and the resultant low costs, as the benefits of such comparatively tiny satellites. They promised to open up “new market areas” for Earth observation.

It took around 15 years for them to be proved right. A few such “smallsats”, sometimes called nanosats or CubeSats, were launched every year in the decade up until 2014, when numbers soared. Planet Labs, a Californian company founded by ex-Nasa engineers, launched 33 smallsats that year, each weighing just a few kilos. Planet's satellites are spiritual successors of TUBSAT, designed to gather imagery of the Earth's surface. The firm sells its customers images from around 150 active satellites it has in orbit.

Planet Labs is an industry leader. The cost of making and launching satellites has tumbled, enabling an array of new space-based businesses to emerge. In the past year smallsats have been launched that can use radar to peer through clouds or darkness. Others watch for unlawful shipping activities and yet more are built to service or move around other satellites in orbit. Perhaps the most odd venture is a rescue satellite, designed to pull other satellites down to safety if something goes wrong, to avoid catastrophic collisions with neighbours.

Much of the recent attention has focused on the internet-connection *constellations* (星座) in low Earth orbit proposed by SpaceX and OneWeb. These have long been planned, and the billions of dollars required to install them are feeding the entire market.

Many of the capabilities of the new smallsats already existed, but mostly as government projects or as secretive intelligence operations. America has long sought to inhibit the commercial development of radar satellites, so powerful are their surveillance properties. Military radar satellites, which bounce radio waves off the surface of the Earth in order to build up a detailed picture of it, were said to be capable of detecting enemy submarines by measuring the tiny disturbances that their wakes left in the curve of the surface of the ocean.

Earth's orbits suddenly look busier than ever before. Companies are going into space because it offers a different advantage point, allowing them to gather valuable new, previously-unaffordable information. TUBSAT's "new market areas" are at last open for business.

51. What is the purpose of launching an unusual satellite in 1999?
- A) To observe other satellites in orbit.
 - B) To test the running state of video cameras.
 - C) To monitor the behaviors of atmosphere.
 - D) To picture valuable images of Earth
52. What can we learn about Planet Labs?
- A) Its home-made satellites are costly.
 - B) It launches satellites with high mass.
 - C) It prompts new space-based firms to emerge.
 - D) It applies smallsats to oversee illegal shipping.
53. According to the passage, the rescue satellite is designed to _____.
- A) avert a disastrous crash with other satellites.
 - B) ensure nothing goes wrong in smallsats.
 - C) peer through clouds and darkness with radar
 - D) prevent the orbit debris out of control.
54. What does America think of the commercial development of radar satellites?
- A) It should be prohibited.

- B) It needs to be surveilled.
- C) It promotes economic growth.
- D) It is supported by government.

55. Why do companies participate in space-based business?

- A) To gain much more profits than ever before.
- B) To satisfy the increasing needs for customers.
- C) To make a breakthrough in new market areas.
- D) To help them get access to valuable information.

Part IV

Translation

(30 minutes)

Directions: *For this part, you are allowed 30 minutes to translate a passage from Chinese into English. You should write your answer on **Answer Sheet 2**.*

中国传统建筑以汉建筑为主，主要包括宫殿、寺庙和园林等类型。在漫长的发展过程中，中国建筑的特征基本保持不变。在秦汉时期，它的发展历史达到第一个高潮。此后每一次热潮都伴随着国家的统一、长治久安和激进的文化交流等社会背景。例如，隋唐统一促进了中国与其他亚洲国家以及中国南北之间的文化交流。另外，中国建筑特别注重群体组合之美，但也会采用自由组合的方式，二者都能体现中华民族含蓄和从容的审美习惯。
