

Part I 井书**Writing****30 minutes**

Directions: *For this part, you are allowed 30 minutes to write an essay commenting on the saying "Never leave that until tomorrow, which you can do today." You can cite examples to illustrate the importance of self-discipline. You should write at least 150 words but no more than 200 words.*

Part II**Listening Comprehension****30 minutes****Section A**

Directions: *In this section, you will hear two long conversations. At the end of each conversation, you will hear four questions. Both the conversation and the questions will be spoken only once. After you hear a question, you must choose the best answer from the four choices marked A), B), C) and D). Then mark the corresponding letter on **Answer Sheet 1** with a single line through the centre.*

Questions 1 to 4 are based on the conversation you have just heard.

1

- A. Summer-vacation internship programs.
- B. Employment opportunities provided by schools.
- C. Potential risks of working part-time.
- D. The importance of a clear and explicit contract.

2

- A. They are responsible for carrying students to the company.
- B. They are trying to make students have a strong sense of security.
- C. They should have everything concerning their students' rights in hand.
- D. They ought to gain a reputation for providing good job opportunities.

3

- A. Students are unwilling to work overtime and report to schools.
- B. Schools refuse to sign contracts with them because of the strict rules.
- C. Schools don't get a permit to organize part-time work for students.
- D. Training and insurance is a huge investment due to limited work time.

4

- A. Students find it hard to protect their rights.
- B. Students can complain to local education authorities.
- C. Companies act according to the agreement they signed.
- D. Schools accept unfair contracts regardless of students' rights.

Questions 5 to 8 are based on the passage you have just heard.

5

井书

- A. A university tutor.
- B. An insurance adviser.
- C. An overseas study officer.
- D. A visa officer.

6

- A. It is purchased in the country you will travel.
- B. It provides just a few kinds of medical services.
- C. It provides doctors who may speak your native language.
- D. It will provide doctors from your home country.

7

- A. It must be purchased in one's home country before going abroad..
- B. It does not cover the catastrophic medical expenses.
- C. It only recommends doctors who speak your native language.
- D. It features personal paying first and compensation later.

8

- A. Consult other insurance companies.
- B. Buy the student health insurance.
- C. Get the international travel insurance.
- D. Choose neither insurance since they are not necessary.

Section B

Directions: In this section, you will hear two passages. At the end of each passage, you will hear three or four questions. Both the passage and the questions will be spoken only once. After you hear a question, you must choose the best answer from the four choices marked A), B), C) and D). Then mark the corresponding letter on Answer Sheet 1 with a single line through the center.

Questions 9 to 12 are based on the passage you have just heard.

9

- A. By borrowing money from the government.
- B. By loaning from the bank and the private agency.
- C. By getting scholarship and interest-free loan from the government.
- D. By borrowing from parents and engaging in part-time jobs.

10

- A. They doubt whether it could change the current situation.
- B. They are glad to have it in order to ensure fairer university funding.
- C. They are worried that it would make students' burden heavier.

D. They want to make sure the tuition fees would not go higher.

11

A. Offering one-year degrees.

B. Providing flexible, part-time courses.

C. Financing students living at home.

D. Cutting teaching grants.

12

A. The hard economy and fierce competition in the job market.

B. The high unemployment rate even for graduates.

C. The fact that more people are applying for further education.

D. The higher fees coming with the new scheme.

Questions 13 to 15 are based on the passage you have just heard.

13

A. It makes buying easier since one needn't carry large amounts of cash.

B. It is useful in times of emergencies like medical bills caused by accidents.

C. It helps build a credit record for bigger purchases in later years.

D. It offers additional protection if something one has bought is lost or damaged.

14

A. A debit card that has a credit limit.

B. A checking account.

C. A credit card with low an interest rate.

D. A card with lower penalties.

15

A. Write and send application forms to the bank.

B. Check the bank account to make sure the credit limit.

C. Read the agreement terms carefully and make a comparison.

D. Search the Internet for advice from users of different cards.

Section C

Directions: In this section, you will hear three recordings of lecturer or talks followed by three or four questions. The recordings will be played only once. After you hear a question, you must choose the best answer from choices marked A), B), C) and D). Then mark the corresponding letter on Answer Sheet 1 with a single line through the center.

Questions 16 to 19 are based on the recording you have just heard.

- A. They show us how to make achievable resolutions.
- B. They tell us to try different resolutions every year.
- C. They introduce resolutions made by different people.
- D. They focus on the necessity of making resolutions.

17

- A. About trying.
- B. About choosing.
- C. About enjoying.
- D. About learning.

18

- A. To know more about ourselves.
- B. To improve ourselves in future.
- C. To make sure it is our ideal life.
- D. To make up for some mistakes.

19

- A. Try something challenging.
- B. Rebuild your dreams.
- C. Make some different plans.
- D. Do something you are able to handle.

Questions 20 to 22 are based on the recording you have just heard.

20

- A. He is afraid of making mistakes.
- B. He tries hard to solve difficult problems.
- C. He has been a teacher in official schools.
- D. He is proud of his MBA degree.

21

- A. Ask others for help.
- B. Enhance our own abilities.
- C. Spend little time on them.
- D. Pay more attention to them.

22

- A. Problem-solving skills.
- B. Communicating skills.
- C. Negotiating skills.
- D. Coordinating skills.

Questions 23 to 25 are based on the recording you have just heard.

- A. Capital can promote passion.
- B. Capital is the base of passion.
- C. Passion is as important as capital.
- D. Passion can bring capital.

24

- A. There will be both advantages and disadvantages.
- B. We will improve our relationship with family and friends.
- C. We may have some disagreement with them.
- D. They will help us more than other people.

25

- A. Whether to change another area of business.
- B. Who to cooperate with in new business opportunities.
- C. When to hand business to our offspring or other family.
- D. How to make our business go on after you retire.

Part III**Reading Comprehension****40 minutes****Section A**

Directions: In this section, there is a passage with ten blanks. You are required to select one word for each blank from a list of choices given in a word bank following the passage. Read the passage through carefully before making your choices. Each choice in the bank is identified by a letter. Please mark the corresponding letter for each item on **Answer Sheet 2** with a single line through the Centre. You may not use any of the words in the bank more than once.

Questions 26 to 35 are based on the following passage.

In the 1920s, movie palaces rose up around the country like so many portals (大门) into a glamorous world. After you bought a ticket, you might pass through gilded archways and ___26___ a grand staircase lighted by a crystal chandelier to find your velvet seat. Eating was not meant to be part of the experience.

A widow named Julia Braden persuaded the Linwood Theater to let her set up a stand in the lobby and ___27___ built a popcorn empire. By 1931, she owned stands in or near four movie theaters and pulled in more than \$14 400 a year — the ___28___ of \$336 000 in today's dollars. Her business grew even in the midst of the Depression, at the same time that thousands of elegant theaters went _____.

It's ___30___ to establish who sold the first box of movie popcorn. For decades, vendors operated out of wagons parked near theaters, circuses and ballparks, selling a variety of ___31___ But Braden seems to have been among the first to set up concessions (摊位) linked to movie houses — and to

___32___ a new business strategy: The money was in popcorn, not ticket sales.

An old man selling popcorn outside one of McKenna's movie houses ___33___ enough money to buy a house, a farm and a store. McKenna installed a popcorn machine in the lobby and collected the proceeds—as much as \$200 000 in 1938. With that kind of money ___34___ in, who cared about the rugs? By the 1940s, most theaters had followed suit, and soon lobbies were full of the smell of ___35___ butter. One entrepreneur of the era offered the following advice: "Find a good popcorn location and build a theater around it."

A) amassed	F) equivalent	K) pioneer
B) amount	G) eventually	L) rolling
C) ascend	H) impossible	M) snacks
D) bust	I) intellectually	N) stained
E) deposited	J) melted	O) timely

Section B

Directions: In this section, you are going to read a passage with ten statements attached to it. Each statement contains information given in one of the paragraphs. Identify the paragraph from which the information is derived. You may choose a paragraph more than once. Each paragraph is marked with a letter. Answer the questions by marking the corresponding letter on Answer sheet 2.

Questions 36 to 45 are based on the following passage.

Does the Internet Make You Dumber?

A. The Roman philosopher Seneca may have put it best 2 000 years ago; "To be everywhere is to be nowhere." Today, the Internet grants us easy access to unprecedented amounts of information. But a growing body of scientific evidence suggests that the Net, with its constant distractions and interruptions, is also turning us into disrupted and superficial thinkers.

B. The picture emerging from the research is deeply troubling, at least to anyone who values the depth, rather than just the velocity (速度), of human thought. People who read text studded with links, the studies show, comprehend less than those who read traditional linear text. People who watch busy multimedia presentations remember less than those who take in information in a more sedate (镇定的) and focused manner. People who are continually distracted by e-mails, alerts and other messages understand less than those who are able to concentrate. And people who juggle (同时应付) many tasks are less creative and less productive than those who do one thing at a time.

C. The common thread in these disabilities is dispersing our attention. The richness of our thoughts, our memories and even our personalities hinges on our ability to focus the mind and sustain concentration. Only when we pay deep attention to a new piece of information are we able to associate it "meaningfully

and systematically with knowledge already well established in memory,” writes the Nobel Prize winning neuroscientist (神经科学家) Eric Kandel. Such associations are essential to mastering complex concepts.

D. When we're constantly distracted and interrupted, as we tend to be online, our brains are unable to generalize the strong and expansive neural connections that give depth and distinctiveness to our contemplating. We become mere signal-processing units, quickly shepherding disjointed bits of information into and then out of short-term memory.

E. In an article published in Science last year, Patricia Greenfield, a leading developmental psychologist, reviewed dozens of studies on how different media technologies influence our cognitive abilities. Some of the studies indicated that certain computer tasks, like playing video games, can enhance “visual literacy skills”, increasing the speed at which people can shift their focus among icons and other images on screens. Other studies, however, found that such rapid shifts in focus, even if performed adeptly, result in less rigorous and “more automatic” thinking.

F. In one experiment conducted at Cornell University, for example, half a class of students was allowed to use Internet-connected laptops during a lecture, while the other had to keep their computers shut. Those who browsed the Web performed much worse on a subsequent test of how well they retained the lecture's content. While it's hardly surprising that Web surfing would distract students, it should be a note of caution to schools that are wiring their classrooms in hopes of improving learning.

G. Ms. Greenfield concluded that “every medium develops some cognitive skills at the expense of others.” Our growing use of screen-based media, she said, has strengthened visual-spatial intelligence, which can improve the ability to do jobs that involve keeping track of lots of simultaneous signals, like air traffic control. But that has been accompanied by “new weaknesses in higher-order cognitive processes,” including “abstract vocabulary, mindfulness, reflection, inductive problem solving, critical thinking, and imagination”. We're becoming, in a word, shallower.

H. In another experiment, recently conducted at Stanford University's Communication between Humans and Interactive Media Lab, a team of researchers gave various cognitive tests to 49 people who do a lot of media multitasking and 52 people who multitask much less frequently. The heavy multitaskers performed poorly on all the tests. They were more easily distracted, had less control over their attention, and were much less able to distinguish important information from trivial.

I. The researchers were surprised by the results. They had expected that the intensive multitaskers would have gained some unique mental advantages from all their on-screen juggling. But that wasn't the case. In fact, the heavy multitaskers weren't even good at multitasking. They were considerably less adept at switching between tasks than the more infrequent multitaskers. “Everything distracts them.” observed Clifford Nass, the professor who heads the Stanford lab.

J. It would be one thing if the ill effects went away as soon as we turned off our computers and cellphones. But they don't. The cellular structure of the human brain, scientists have discovered, adapts readily to the tools we use, including those for finding, storing and sharing information. By changing our habits of mind, each new technology strengthens certain neural pathways and weakens others. The cellular alterations continue to shape the way we think even when we're not using the technology.

K. The pioneering neuroscientist Michael Merzenich believes our brains are being "massively remodeled" by our ever-intensifying use of the Web and related media. In the 1970s and 1980s, Mr. Merzenich, now a professor emeritus(荣誉退休教授) at the University of California in San Francisco, conducted a famous series of experiments on primate brains that revealed how extensively and quickly neural circuits change in response to experience. When, for example, Mr. Merzenich rearranged the nerves in a monkey's hand, the nerve cells in the animal's sensory cortex quickly reorganized themselves to create a new mental map of the hand. In a conversation late last year, he said that he was profoundly worried about the cognitive consequences of the constant distractions and interruptions the Internet bombards us with. The long-term effect on the quality of our intellectual lives, he said, could be "deadly".

L. What we seem to be sacrificing in all our surfing and searching is our capacity to engage in the quieter, attentive modes of thought that underpin contemplation, reflection and introspection. The Web never encourages us to slowdown. It keeps us in a state of perpetual mental locomotion. It is revealing, and distressing, to compare the cognitive effects of the Internet with those of an earlier information technology, the printed book. Whereas the Internet scatters our attention, the book focuses it. Unlike the screen, the page promotes contemplativeness.

M. Reading a long sequence of pages helps us develop a rare kind of mental discipline. The innate bias of the human brain, after all, is to be distracted. Our predisposition is to be aware of as much of what's going on around us as possible. Our fast-paced, reflexive shifts in focus were once crucial to our survival. They reduced the odds that a predator would take us by surprise or that we'd overlook a nearby source of food.

N. To read a book is to practice an unnatural process of thought. It requires us to place ourselves at what T. s. Eliot, in his poem "Four Quartets", called the still point of the turning world". We have, to forge or strengthen the neural links needed to counter our instinctive distractedness, thereby gaining greater control over our attention and our mind.

N. It is this control, this mental discipline, which we are at risk of losing as we spend ever more time scanning and skimming online. If the slow progression of words across printed pages damped our craving to be inundated by it. It returns us to our native state of distractedness, while presenting us

mental stimulation, the Internet indulges it. It returns us to our native state of distractedness, while presenting us with far more distractions than our ancestors ever had to contend with. Nicholas Carr, is the author, most recently, of *The Shallows: What the Internet Is Doing to Our Brains*.

36. Rapid shifts in focus on screens result in more automatic but less strict thinking.

37. People grasp less of text filled with hyperlinks than of traditional text.

38. According to Ms. Greenfield, growing use of screen-based media has improved our visual spatial intelligence.

39. The richness of our memories relies on our ability to concentrate.

40. Unprecedented amounts of information can make our thoughts scattered and superficial.

41. When we turn off our computers and cellphones, the ill effects will not disappear.

42. When we are online, our brains cannot form distinctive and profound thinking.

43. Whereas the Internet distracts our attention, the book concentrates it.

44. Web surfing would distract students rather than improve their learning.

45. According to the experiment at Stanford University, multitaskers' attention was easily scattered.

Section C

Directions: *There are 2 passages in this section. Each passage is followed by some questions or unfinished statements. For each of them there are four choices marked A), B), C) and D). You should decide on the best choice and mark the corresponding letter on Answer Sheet 2 with a single line through the center.*

Passage One Questions 46 to 50 are based on the following passage.

There are too many camels in the Bible, out of time and out of place. Camels probably had little or no role in the lives of some early Jewish patriarchs who lived in the first half of the second millennium BC, and yet stories about them mention these domesticated pack animals more than 20 times. These anachronisms (年代错误) are telling evidence that the Bible was written or edited long after the events it narrates and is not always reliable as verifiable history. These camel stories “do not tell memories from the second millennium,” said Noam Mizrahi, an Israeli biblical scholar, “but should be viewed as speculations from a much later period.”

For two archaeologists at Tel Aviv University, the anachronisms were motivation to dig for camel bones at an ancient copper smelting camp in the Aravah Valley in Israel. They sought evidence of when domesticated camels were first introduced into the land of Israel and the surrounding region. The archaeologists, Erez Ben-Yosef and Lidar Sapir-Hen, used radiocarbon (放射碳) dating to pinpoint the earliest known domesticated camels in Israel to the last third decades of the 10th century BC—centuries after the patriarchs lived and decades after the kingdom of David, according to the Bible. Some bones in

deeper sediments (沉积物), they said, probably belonged to wild camels that people hunted for their meat. Dr. Sapir-Hen could identify a domesticated animal by signs in leg bones that it had carried heavy loads.

"The introduction of the camel to our region was a very important economic and social development," Dr. Ben-Yosef said in a telephone interview. "The camel enabled long-distance trade for the first time, all the way to India, and perfume trade with Arabia. It's unlikely that mules and donkeys could have traveled across the distance from one desert oasis to the next."

Dr. Mizrahi, a professor of Hebrew culture studies at Tel Aviv University who was not directly involved in the research, said that by the seventh century BC camels had become widely employed in trade and travel in Israel and through the Middle East, from Africa as far as India. The camel's influence on biblical research was profound, if confusing, for that happened to be the time that the patriarchal stories were committed to writing and eventually become part of the Hebrew Bible.

"One should be careful not to rush to the conclusion that the new archaeological findings automatically deny any historical value from the biblical stories," Dr. Mizrahi said in an e-mail, "Rather, they established that these traditions were indeed reformulated in relatively late periods after camels had been integrated into the Near Eastern economic system. But this does not mean that these very traditions cannot capture other details that have an older historical background."

46. What can we learn from the anachronisms about ancient camels in the Bible?

- A. The Bible accurately depicts early Jewish patriarchs' lives.
- B. Camels were just early Jewish patriarchs' imagination.
- C. The Bible cannot always be regarded as reliable history.
- D. Camels were used as pack animals by Jewish patriarchs.

47. What is the reliable evidence to distinguish the remains of wild camels from that of domesticated ones?

- A. The radiocarbon dating.
- B. The burial depth of sediments.
- C. The camels' capacity of bearing load.
- D. Trace on the camels' leg bones.

48. What might be an obstacle for the development of ancient Israelites?

- A. Lack of pack animals.
- B. Nearly impassable desert.
- C. Risks in the perfume trade.
- D. The complicated traveling route.

49. Why did people add many camel stories to the Hebrew Bible?

-
- A. Camels made great contributions to people's lives at that time.
 - B. People at that time wanted to confuse the later readers.
 - C. The Hebrews hoped to boost the long-distance trade through camels.
 - D. Writers of the Bible wanted to transfer their love of camels to later generations.

50. What did Dr. Mizrahi think of the Bible?

- A. The Bible is the history of the domesticated camels.
- B. Some people tamper with the Bible.
- C. Some other details in the Bible are also worth studying.
- D. The Bible doesn't have any research value.

Passage Two Questions 51 to 55 are based on the following passage.

We've all been there. You wake up in the middle of the night and grab your smartphone to check the time—it's 3 am—and see an alert. Before you know it, you fall down a rabbit hole of e-mail and Twitter. Sleep? Forget it. Well, I've found a \$7 solution: an old-fashioned alarm clock. My smartphone has been banished from the bedroom.

“It's a very slippery slope, once you've picked up your phone, to see what time it is, to checking your e-mail, to lying awake with anxiety,” said Dr. David M. Claman, director of the Sleep Disorders Centre at the University of California San Francisco Medical Centre, “If you wake up in the middle of the night and check your phone, you will inevitably get frustrated and worried by something you've seen, leading your body to tense up.” Then it's game over. You're tossing and turning, thinking about an e-mail, a text or a meeting in six hours. All these sleep interruptions lead to work problems. A 2011 study by the American Academy of Sleep Medicine found that insomnia costs \$2 280 in lost productivity per American worker every year. That adds up to \$63 billion a year for the nation.

The draw of the smartphone is understandable. The alarm clock is a free feature. It's also incredibly convenient—who doesn't like being able to speak to their phone and say, “Wake me up at 7 am” ? Device makers are helping the trend along and hoping these figures rise. Most new alarm clocks made today are designed to be married to a smartphone. This goes against years of research showing that screens, in any capacity, do everything but help us fall asleep. In 2012, the American Medical Association's Council on Science and Public Health said that “exposure to excessive light at night, including extended use of various electronic media, can disrupt sleep or exacerbate (使恶化) sleep disorders.”

Sleep researchers say that looking at a blue light, which is produced by smartphone and tablet screens, sets off brain receptors that are designed to keep us awake and interferes with circadian (生理节奏的) sleep patterns. Experimental research has found that if people use a tablet for up to two hours before bed, it takes an extra hour to fall asleep.

Orfeu M. Buxton, a neuroscientist and assistant professor in the division of sleep medicine at Harvard Medical School, said the phone in the bedroom could set off what he called “threat alertness”, which is a type of anxiety that keeps you awake. This means that you're never off, you're always watchful, which is a hallmark to insomnia (失眠),” he said.

51. What is the initial reason that some people lie awake in the middle of the night?

- A. They are sleepless.
- B. They must reply to e-mails at midnight.
- C. They check time to avoid being late for school or work.
- D. They have kept the habit of waking up at midnight.

52. What does the author mean by saying “It's a very slippery slope” (Line 1, Para. 2)?

- A. Checking phone at midnight will trigger a chain reaction.
- B. Checking what time it is will cause sleeplessness.
- C. Information on the phone will get people relaxed.
- D. Phones will wake up people at midnight.

53. What does the author think of the integration of alarm clocks and phones?

- A. It is good as it is convenient for people to use.
- B. It is likely to affect sleep.
- C. It is of little draw to people.
- D. It is against phone makers' interests.

54. What will happen if you take two hours to use a tablet before sleeping?

- A. It will be easier for you to get sleep.
- B. It will be harder for you to get sleep.
- C. It will make you get up late the next morning.
- D. It will do harm to your health.

55. What is said about “threat alertness” in the last paragraph?

- A. It keeps you safe in the sleep.
- B. It helps you fall asleep.
- C. It makes you watchful.
- D. It warns you about threats.

Part IV Translation

30 minutes

Directions: For this part, you are allowed 30 minutes to translate a passage from Chinese into English. You should write your answer on **Answer Sheet 2**.

中国以其人口密集、疆域辽阔而著称。作为一个多民族国家，中国共有 56 个民族，总人口约 14 亿人。汉族是中华民族的主体民族，约占全国人口的 92%，主要分布在东部和中部。而其他少数民族居住相对分散，主要分布在中国的西南、西北和东北部地区等边疆地区。每个少数民族都有与众不同的特点、悠久的传统文化和独特的风俗习惯。中国政府长久以来一直提倡和发展平等、团结的民族关系，强调各民族共同发展、共同繁荣。
